

Management of Project Risks

MP207

Project managers are forced to evaluate the project risks. Sources of risk can be manifold and all of them may result in negative outcomes. Therefore it is of vital importance to identify the project risks and to apply risk management tools in order to assess, mitigate and manage the risk. The risk derives directly from unpredictability in small R&D projects as well as in multidisciplinary ones. Potential risks cannot be excluded. The course will provide know-how and skills to reduce potential risk elements.

The following topics will be covered:

- Approaches to define risk
- Impacts of risk
- Types of risk
- Development of risk management
- Risk management processes
- Risk assessment
- Risk classification systems
- Risk communication
- Risk reporting.

The course mainly focuses on individuals involved in interdisciplinary projects: managers, scientists, engineers, technical and administrative staff.

Duration: 1 day
